YOU MUST PRINT THIS PAGE BEFORE MEASURING! USE A RULER OR COIN TO MAKE SURE THE PAGE IS THE CORRECT SIZE. If it prints wrong, go to file-page set-up and set scale to none-100%.

1. Overlay the left lens of your glasses on to the left lens of the drawing that best covers the lens and frame of your glasses. The drawing should be larger than your glasses, but not more than 2mm or 1/16". **NOTE:** Another frame shape might provide a better fit.
2. The overall length of your glasses must be equal to or less than the overall length of the drawing. If your glasses are larger, try the next larger size. If the overall length of your glasses is larger, our expanding bridge clip-ons adjust to glasses with larger bridges.
3. Note the size and shape and make your selection.
